Specifications

Telescopic Boom Rough Terrain Crane

RTC-8060

60-ton (54.43 metric tons)

General Dimensions		feet	meters
Turning radius (4-wheel steer centerline of tires)		23' 10"	7.26
Turning radius (2-wheel steer centerline of tires)		46' 10"	14.27
Turning radius (4-wheel steer outside front carrier corner)		27' 5"	8.36
Turning radius (2-wheel steer outside front carrier corner)		49' 10"	15.19

Dimension	Tire Size	
	29.5 x 25	29.5 R 25
A	12' 10.25" (3.92 m)	12' 11.25" (3.94 m)
B	7' 11" (2.39 m)	8' 0" (2.42 m)
C	2' 8" (0.81 m)	2' 9" (0.84 m)
D	12' 4.25" (3.77 m)	12' 5.25" (3.79 m)
E	9" (0.23 m)	10" (0.25 m)
F	14.25" (0.36 m)	15.25" (0.39 m)
G	11.25" (0.29 m)	12.25" (0.31 m)

Upper Structure

■ Boom

Patented Design

- Boom side plates have diamond shaped impressions for superior strength to weight ratio and 100,000 p.s.i. (689.5 MPa) steel angle chords for lateral stiffness.
- Boom telescope sections are supported by top, bottom and adjustable side wear shoes to prevent metal to metal contact.

Standard Boom

- 35.5' – 110' (10.82 – 33.53 m) four-section full power boom.
- Basic mode (or mode 'B') is the full power, synchronized mode of telescoping all sections proportionally 110' (33.53 m).
- The exclusive **A-max** mode (or mode 'A') extends only the inner mid-section to 60.3' (18.38 m) offering increased capacities for in-close, maximum capacity picks.
- Mechanical Boom Angle Indicator

Boom Head

- Five 16.5" (0.42 m) root diameter nylon sheaves handle up to ten parts of wire rope.
- Quick reeve design
- Boom head designed for quick reeve of hook block.
- Rope dead end lugs provided on each side of boom head.
- Easily removable wire rope guards
- Fly pinning alignment tool

Boom Elevation

- Two hydraulic cylinders with holding valves and bushings in each end.
- Foot control for controlling boom elevation from -3° to +78°.
- Hand and foot control for controlling boom elevation – optional.

Optional Auxiliary Lifting Sheave

- Single 16.5" (0.42 m) root diameter nylon sheave with removable wire rope guard mounted on boom.
- Use with one or two parts of line.
- Does not affect erection of fly or use of main head sheaves for multiple reeving.

Optional

- 70-ton (63.50 mt) 5-sheave, quick reeve hook block
- 60-ton (54.43 mt) 4-sheave, quick reeve hook block
- 40-ton (36.29 mt) 4-sheave, quick reeve hook block
- 8.5-ton (7.7 mt) hook ball
- Boom floodlight

■ Fly

Optional

- 34' (10.36 m) One piece lattice fly, stowable, offsettable to 1°, 15° or 30° with or without additional lugs to allow for second section.
- 34' – 56' (10.36 – 17.07 m) Two piece (bi-fold) lattice fly, stowable, offsettable to 1°, 15° or 30°.

■ Cab and Controls

Environmental Cab

- Isolated from sound and vibration by a neoprene seal.
- Six-way adjustable operator's seat with retractable seat belt.
- Four-way adjustable tilting-telescoping and locking steering wheel.
- All windows are tinted and tempered safety glass.
- Slide by door opens to 3' (0.91 m) width.
- Sliding rear and right side windows and swing up roof windows for maximum visibility and ventilation.
- Engine dependent warm-water heater with defroster.
- Dash mounted outrigger controls
- Sight level bubble
- Audible swing alarm
- Backup alarm
- Sun screen
- Electric windshield wiper
- Windshield washer
- Fire extinguisher
- Top hatch window wiper
- Hand throttle
- Warning horn
- Travel lights
- Circulating fan
- Mirrors
- Cup holder

Optional

- Amber strobe light and rotating beacon
- Emergency steering system
- Rear steer indicator
- Air conditioning
- Cab mounted spotlight

Controls

Hydraulic control levers for:

- Main winch
- Boom telescope
- Drum rotation Indicators
- Optional – auxiliary winch controls
- Boom hoist
- Swing

Foot controls for:

- Swing brake
- Foot throttle
- Boom hoist foot control – optional

Cab Instrumentation

Dash mounted gauges for:

- Hydraulic oil temperature
- Converter temperature
- Oil pressure
- Audio / visual warning system
- Water temperature
- Fuel
- Voltmeter
- Tachometer

■ Rated Capacity Limiter

- **Microguard 434** Graphic audio-visual warning system built into dash with anti-two block and function limiters.

Operating data available includes:

- Machine configuration
- Boom length
- Head height
- Allowed load
- % of allowed load
- Boom angle
- Radius of load
- Actual load

Presetable alarms include:

- Maximum and minimum boom angles
- Maximum tip height
- Maximum boom length
- Swing left/right positions.
- Operator defined area alarm is standard.
- Anti-two block weight designed for quick reeve of hookblock.

Optional

- **Internal RCL light bar:** Visually informs operator when crane is approaching maximum load capacity with a series of lights; green, yellow and red.
- **External RCL light bar:** Visually informs ground crew when crane is approaching maximum load capacity kickouts and presetable alarms with a series of three lights; green, yellow and red.

■ Swing

- Bi-directional hydraulic swing motor mounted to a planetary reducer for 360° continuous smooth swing at 2.4 r.p.m.
- **Swing brake** – 360°, foot operated, hydraulic applied disc brake mounted on the speed reducer.
- **Counterweight** – Pinned to the upper structure of frame. 12,900 lbs. (5 851 kg).
- **360° Swing Lock** – meets New York City requirements.

■ Hydraulic System

Main Pump

- Three-section gear-type pump
- Combined pump capacity 136 gpm (515 lpm)
- Mounted on torque converter, powered by engine through a pump disconnect.
- Pump disconnect is a spline-type clutch engaged/disengaged from carrier.
- Pump operates at 3,000 p.s.i. (20.7 MPa) maximum system pressure.

Brake Pump

- Pressure compensated piston pump powered by carrier engine. Operates at 2,650 psi (18.3 Mpa) maximum.

Swing / Outrigger / Steering Pump

- Single gear-type pump, 24 gpm (91 lpm) maximum. Mounted on torque converter, powered by engine through a straight mechanical drive.
- Pump operates at 3,000 p.s.i. (20.7 MPa) maximum system pressure.

Reservoir

- 170 gal. (643.5 l) capacity. Diffusers for deaeration

Filtration

- One, 10-micron filter located inside hydraulic reservoir. Accessible for easy replacement.

Control Valves:

- Six separate pilot operated control valves allow simultaneous operation of all crane functions.

Load Hoist System

Standard

- 2M rear winch with grooved lagging.

- Two-speed motor and automatic brake.
- Power up/down mode of operation.
- Controls for future addition of auxiliary winch.
- Bi-directional gear-type hydraulic motor, driven through a planetary reduction unit for positive operator control under all load conditions.
- Asynchronous parallel double crossover grooved drums minimize rope harmonic motion.

Line Pulls and Speeds

- Maximum line pull 16,266 lbs. (7 378 kg) and maximum line speed of 454 f.p.m. (138 m/min) on standard 16" (0.41 m) root diameter grooved drum
- Rotation resistant rope

Optional

- 2M front winch with two-speed motor and automatic brake, power up/down mode of operation.

Carrier

Type

- 10' 10.5" (3.31 m) wide, 151" (3.84 m) wheelbase.
- 4 x 4 x 4 – (4-wheel steer, 4-wheel drive) For rough terrain with limited turning area.

Frame

- 100,000 p.s.i. (689.5 MPa) steel, double walled construction.
- Integral 100,000 p.s.i. (689.5 MPa) steel outrigger boxes.

Standard Carrier Equipment

- Two front and rear carrier steps
- Non-slip safety strips on carrier deck
- Deep front storage
- Fenders
- Pontoon storage
- Full lighting package
- Lifting lugs
- Front towing shackles

Optional

- Front and rear mounted pintle hook
- Front tow winch

Engine

Engine	Caterpillar 3126B 7.2L
Cylinders – cycle	6 – 4
Bore	4.33 in. (110 mm)
Stroke	5.00 in. (127 mm)
Displacement	442 cu. in. (7.2 L)
Maximum brake hp	225 @ 2,200 rpm
Peak torque (ft. lb.)	646 @ 1,500 rpm
Electric system	12 volt
Starting system	12 volt
Fuel capacity	95 gallons (359.61 l)
Alternator	130 amps
Crankcase capacity (total system)	30 qts. (28 l)
<ul style="list-style-type: none"> • Water/fuel separator on engine • Ether injection package – optional 	

Transmission

- Spicer off-highway three-speed, two range power shift transmission.
- Six speeds forward and two reverse
- Front axle disconnect for two or four-wheel drive.

Axles

- Front and Rear – Heavy duty planetary drive/steer type.
- Front axle disconnect

Suspension

Front Axle

- Rigid mounted to frame.

Rear Axle

- Pin mounted on bronze bushings.
- Automatic hydraulic rear axle oscillation lock-out cylinders engage when upper structure rotates past 2.5° of centerline.

Steering

- Hydraulic two-wheel, four-wheel and "crab" steering.
- Modes selected by toggle switch on dash.
- All modes fully controlled by steering wheel.

Tires

Front and Rear

- Standard 29.5 x 25 (28-PR) Earthmover type

Optional

- 29.5R25 XHA 1 star radials
- Spare tires and rims.

Brakes

Service

- Hydraulic disc-type brakes at each wheel end.

Parking/Emergency

- Disc-type spring applied, hydraulic release, cab controlled, mounted to front axle.

Outriggers

- Three position operation capability.
- Four hydraulic, telescoping beam and jack outriggers.
- Vertical jack cylinders equipped with integral holding valve.
- Beams extend to 22' 0" (6.71 m) centerline-to-centerline and retract to within 10' 10.5" (3.31 m) overall width.
- Equipped with stowable, lightweight 23.5" x 27.25" (59.7 x 69.2 cm) hexagonal steel pontoons.
- Controls and sight level bubble located in upper structure cab.

Confined Area Lifting Capacities (CALC™) System

- Three operational outrigger configurations are available:
 - Full extension – 24' 0" (7.32 m)
 - Intermediate position – 17' 6" (5.33 m).
 - Full retraction – 11' 0.75" (3.37 m).
- For confined area operation, rated lifting capacities are provided for the intermediate and fully retracted outrigger positions.
- When the outrigger position levers (located on the outrigger beams) are engaged, the operator can set the crane in the intermediate or full retraction outrigger position without having to leave the cab.

Optional

- Outrigger cover package

Travel Speeds and Gradability

Tires	29.5 x 25
Maximum Speed	19.8 (31.9 km/h)
Gradability at 70% convertor efficiency	140.7%
Maximum Tractive Effort at 70% convertor efficiency	76,507 lbs. (34 703 kg)
Gradability at 1.0 mph (1.6 km/hr)	62.5%
Maximum Tractive Effort at 1.0 mph. (1.61 km/hr)	50,376 lbs. (22 850 kg)
Machine operating angle must not exceed 35° (77% grade). Numbers reflect main hydraulic pump engaged.	

■ Axle Loads

Base machine with standard 35.5' – 110' (10.82 – 33.53 m) four-section boom, 2M main winch with 2-speed hoisting and power up/down, 600' (182.88 m) 3/4" (19 mm) wire rope. 4x4x4 carrier with Caterpillar 3126B 7.2L engine, 29.5 x 25 tires, counterweight and no fuel.	G.V.W. ¹		Upper facing front				Upper facing rear

Lifting Capacities

Telescopic Boom Rough Terrain Crane

RTC-8060 60-ton (54.43 metric ton)

Boom and fly capacities for this machine are listed by the following sections:

Fully Extended Outriggers

- Working Range Diagram (12,900 lbs. Counterweight)
- 35.5' – 60.3' (10.82 – 18.38 m) Main Boom Capacities, **A-max** Mode
- 35.5' – 110' (10.82 – 33.53 m) Main Boom Capacities, Basic Mode "B"
- 34' (10.36 m) Offset Fly Capacities, Basic Mode "B"
- 34' – 56' (10.36 – 17.07 m) Two-piece Offset Fly Capacities, Basic Mode "B"

On Tires

- Working Range Diagram (12,900 lbs. Counterweight)
- 35.5' – 60.3' (10.82 – 18.38 m) Main Boom Capacities, **A-max** Mode
- 35.5' – 110' (10.82 – 33.53 m) Main Boom Capacities, Basic Mode "B"

CAUTION: This material is supplied for reference use only. Operator must refer to in-cab Crane Rating Manual to determine allowable machine lifting capacities and operating procedures.

 **WARNING**

READ AND UNDERSTAND THE OPERATOR'S AND SAFETY MANUALS AND THE FOLLOWING INSTRUCTIONS AND RATED LIFTING CAPACITIES BEFORE OPERATING THE CRANE. OPERATION WHICH DOES NOT FOLLOW THESE INSTRUCTIONS MAY RESULT IN AN ACCIDENT.

OPERATING INSTRUCTIONS

GENERAL:

1. Rated lifting capacities in pounds as shown on lift charts pertain to this crane as originally manufactured and normally equipped. Modifications to the crane or use of optional equipment other than that specified can result in a reduction of capacity.
2. Construction equipment can be dangerous if improperly operated or maintained. Operation and maintenance of this crane must be in compliance with the information in the Operator's, Parts, and Safety Manuals supplied with this crane. If these manuals are missing, order replacements through the distributor.
3. The operator and other personnel associated with this crane shall read and fully understand the latest applicable American National Standards Institute (ANSI) safety standards for cranes.
4. The maximum allowable lifting capacities are based on crane standing level on firm supporting surface.

SET UP:

1. The crane shall be leveled on a firm supporting surface. Depending on the nature of the supporting surface, it may be necessary to have structural supports under the outrigger pontoons or tires to spread the load to a larger bearing surface.
2. When making lifts on outriggers, all tires must be free of supporting surface. All outrigger beams must be extended to the same length; fully retracted, intermediate, or fully extended.
3. When making lifts on tires, they must be inflated to the recommended pressure. (See Operation note 19 and Tire Inflation.)
4. When operating on tires, do not exceed 76 degree maximum boom angle. Loss of backward stability will occur causing a tipping condition.
5. For required parts of line, see Wire Rope Capacity and Winch Performance.

OPERATION:

1. Rated lifting capacities at rated radius shall not be exceeded. Do not tip the crane to determine allowable loads. For concrete bucket operation, weight of bucket and load shall not exceed 80% of rated lifting capacities. For clamshell bucket operation, weight of bucket and bucket contents is restricted to a maximum weight of 7000 pounds or 80% of rated lifting capacity, whichever is less. For magnet operation, weight of magnet and load is restricted to a maximum weight of 7000 pounds or 80% of rated lifting capacity, whichever is less. For clamshell and magnet operation, maximum boom length is restricted to 55 feet and the boom angle is restricted to a minimum of 35 degrees. Lifts with either fly erected or boom in "Mode A" are prohibited for both clam and magnet operation.
2. The crane capacities shown on fully extended, or intermediate extended outriggers do not exceed 85% of the tipping loads. The crane capacities shown on fully retracted outriggers or tires do not exceed 75% of the tipping loads as determined by SAE crane stability test code J-765A.

3. The crane capacities in the shaded areas above the bold lines, are based on structural strength or hydraulic limitations. The crane capacities below the bold lines are based on stability ratings. Some capacities are limited by a maximum obtainable 78° boom angle.
4. Rated lifting capacities include the weight of hook block, slings, bucket, magnet, and auxiliary lifting devices. Their weights must be subtracted from the listed rated capacity to obtain the net load which can be lifted. Also, see Capacity Deductions For Auxiliary Load Handling Equipment.
5. Rated lifting capacities are based on freely suspended loads. No attempt shall be made to move a load horizontally on the ground in any direction.
6. Rated lifting capacities are for lift crane service only.
7. Do not operate at any radii or boom lengths (minimum or maximum) where capacities are not listed. At these positions, the crane can overturn without any load on the hook or cause boom failure.
8. The maximum loads which can be telescoped are not definable because of variation in loadings and crane maintenance, but it is permissible to attempt retraction and extension within the limits of the applicable load rating chart.
9. For main boom capacities when either boom length or radius or both are between values listed, proceed as follows:
 - a. For boom lengths not listed, use rating for next longer boom length or next shorter boom length, whichever is smaller.
 - b. For load radii not listed, use rating for next larger radius.
10. The user shall operate at reduced ratings to allow for adverse job conditions, such as: soft or uneven ground, out of level conditions, wind, side loads, pendulum action, jerking or sudden stopping of loads, hazardous conditions, experience of personnel, traveling with loads, electrical wires, etc. Side load on boom or fly is extremely dangerous.
11. When making lifts with auxiliary head machinery, the effective length of the boom increases by 2 feet.
12. Power sections of boom must be extended in accordance with boom mode "A" or "B". In boom mode "B" all power sections must be extended or retracted equally.
13. The least stable rated working area on outriggers is over the side.
14. Rated lifting capacities are based on correct reeving. Deduction must be made for excessive reeving. Any reeving over minimum required (see Wire Rope Capacity) is considered excessive and must be accounted for when making lifts. Use working range diagram to estimate the extra feet of rope then deduct 1 lb for each extra foot of wire rope before attempting to lift a load.
15. The loaded boom angle combined with the boom length give only an approximation of the operating radius. The boom angle, before loading, should be greater to account for deflection. For main boom capacities, the loaded boom angle is for reference only. For fly capacities, the load radius is for reference only.

WARNING

Do Not Lower 56 Ft. Offset Fly In Working Position Below 34.5° Main Boom Angle Unless Main Boom Length Is 89 Ft. Or Less, Since Loss Of Stability Will Occur Causing A Tipping Condition.

WORKING RANGE DIAGRAM

Working Range Diagram
On Tires

- Denotes Main Boom—Between Tire Tracks Or Centered Over Front — Boom Mode “B”
- Denotes Main Boom—Between Tire Tracks Or Centered Over Front — Boom Mode “A”
- △ Denotes Main Boom—360°—Boom Mode “B”
- ▲ Denotes Main Boom—360°—Boom Mode “A”

Note: Boom geometry shown is for unloaded condition and crane standing level on firm supporting surface. Boom deflection, subsequent radius and boom angle change must be accounted for when applying load to hook.

WARNING

Do Not Lower The Boom Below The Minimum Boom Angle For No Load As Shown In The Above Chart For The Boom Lengths Shown. Loss Of Stability Will Occur Causing A Tipping Condition. Do not exceed 76° boom angle while over side on tires to prevent tipping backwards.
